

2020 Country Brief:

MALAYSIA

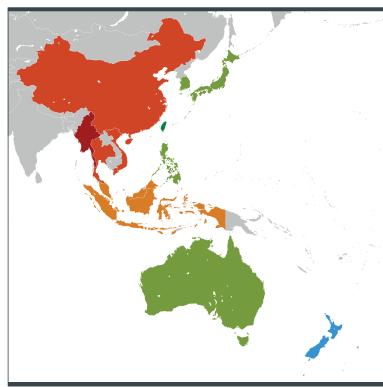

After six decades of rule by the Barisan Nasional (BN) political coalition, which manipulated electoral districts, appealed to ethnic nationalism and supressed opponents, Malaysia experienced its first peaceful transition of power in 2018. The winning opposition alliance, Pakatan Harapan (PH), campaigned on a good governance platform, pledging to instigate economic reforms and address entrenched government corruption that had led to the plundering of billions of dollars from 1MDB, the Malaysian development state fund, chaired by former Prime Minister Najib Razak.² However, the election victory did not prove the watershed moment democracy campaigners had hoped for. The dramatic collapse of the coalition in 2020 brought UMNO,³ the pro-Malay bloc and main party in the BN, back into power at the helm of a new coalition amidst significant political turmoil and uncertainty as to Malaysia's political trajectory.4

Member of Open Government Partnership	No
UN Convention Against Corruption	Ratified in 2008.
Arms Trade Treaty	Has not ratified.

The upheaval has also significantly delayed much needed defence reforms. The implementation of the PH coalition's Defence White Paper has stalled since its collapse, which has coincided with the COVID-19 pandemic. Proposed reforms affecting civil-military relations, civilian control of the armed forces, national defence industry and international cooperation are urgently required to face long-standing and non-traditional security challenges. These include the threat posed by extremist and separatist groups in the region and China's increasingly belligerent stance in the South China Sea.⁵ As things stand, despite some progress, corruption risks remain significant throughout Malaysia's defence governance architecture. Parliamentary oversight is nascent and requires sustained attention to ensure progress is not lost. Auditing practices remain limited in their power to enforce recommendations, while financial secrecy continues to undermine transparency. Procurement is still prey to powerful interests, both foreign and domestic, and vulnerable to corruption. Corruption risks are critical in terms of military operations, and personnel ethics frameworks are undermined by uneven implementation.

Asia-Pacific

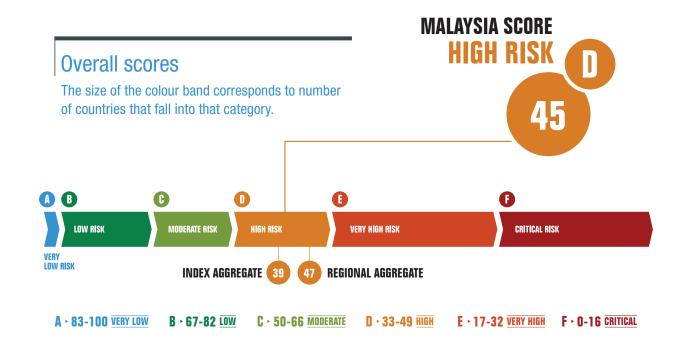

The Asia-Pacific region is home to some of the biggest military and economic powers in the world, as well as critical financial and trade hubs, natural resources and around 60 per cent of the world's population, and the region has become a major area of geopolitical rivalry. The continuing deterioration of Sino-American relations is having widespread implications for countries in the region. Security challenges presented by an increasingly assertive China, the continuing threat posed by North Korea and the protracted insurgencies in Thailand, the Philippines, Myanmar, Indonesia and Malaysia will also remain key concerns moving forward, as will emerging security threats related to cyberwarfare and the impact of climate change. However, Asia-Pacific has huge variations in the quality of defence governance mechanisms, which will determine how well defence institutions can respond to these challenges. It is home to both New Zealand, the highest scorer in the index, and Myanmar, one of the lowest. Though challenges are extremely varied across the sample, corruption risks are particularly pronounced in relation to financial management and procurement, where defence exceptionalism remains pervasive and exempts the sector from standard reporting and publishing standards. Operations too are highly vulnerable to corruption, while personnel management and policymaking are considered significantly more robust.

MALAYSIA

Risk Comparison

Parliamentary Oversight

Legislative oversight of budget (Open Budget Survey, 2019)	31/100
Military expenditure as share of government spending (SIPRI, 2020)	4.2%
Committee members with defence expertise (%)	Data is not publicly available.
# of meetings/year	No evidence of meetings between 2018 and 2020.
Last review of defence policy/strategy	2019 (National Defence Policy)

Under BN rule, the constitutionally-established separation of powers was undermined by the executive's interference and influence over the other two branches of government, with the judiciary in particular co-opted by powerful government figures. 6 The legislature was similarly undermined in its oversight of government policies. Though the 2018 election signalled a strengthening of democratic institutions, the PH coalition's collapse raises questions as to the future of its reform programme.7 The defence sector is one of the areas of government where such reforms are most needed, as civilian and democratic control over the armed forces is not yet wellestablished. Key defence documents, such as the National Defence Policy, are produced internally by the Ministry of Defence (MINDEF) before being presented for parliament for approval, with little space for debate and no mandate to make amendments. Nevertheless, after taking over, the PH coalition undertook reforms to strengthen parliamentary authority over the sector. This included the formation of a Defence Committee,8 with a mandate to provide oversight of the policies, administration and budgets of the defence services. 9 A Special Investigation Committee on Procurement was also established to scrutinise all of MINDEF's past development and procurement projects in an unprecedented attempt to exercise parliamentary control over the military. 10 The committees' only recent creation, combined with significant political turnover in Malaysia, make it difficult to assess their effectiveness as things stand. Oversight is also supported by active internal and external audit mechanisms. The MINDEF's internal audit unit conducts financial management audits of all agencies. 11 Reports are made available to the Auditor General, which scrutinises the unit's activities, though the long-standing absence of a special parliamentary committee led to a lack of parliamentary engagement with such reports. The Auditor General carries out external financial and performance audits of defence institutions, however, there remain question marks over the enforcement of its recommendations. Numerous examples, including the non-delivery of six helicopters in 2017 and 2018, underline how MINDEF fails to respond to or take into account audit findings in its practices. 12

Financial Transparency

Defence-related access to information response rates	(1) % granted full or partial access: Data is not publicly available.
	(2) # subject to backlog: Data is not publicly available.
Defence-related complaints to ombudsman/ commissioner #	No such body exists.
Does the commissioner have authority over the MoD?	No such body exists.
Audit reports on defence (2015-2020) #	Data was not available at the time of research.
Open Budget Index (IBP, 2019)	47/100
World Press Freedom Index (RSF, 2021)	119th out of 180.

Throughout the BN party's rule, the government was highly opaque, with centralised decision-making and a lack of independent oversight. Upon its election in 2018, the PH government pledged to operate with greater openness and strengthen transparent governance to combat corruption.¹³ Its record, however, was mixed and the PH's collapse leaves many of its proposed reforms affecting access to information and transparency in legislative limbo. The defence sector, in particular, has long been held as the most opaque area of government activity, owing to its sensitivity and proximity to the regime. Budget transparency, for instance, has long been restricted. The published defence budget provides only a general outline rather than a comprehensive breakdown of expenditure across functions. Moreover, Parliament has less than 20 days to discuss and approve the budget and, ¹⁴ prior to 2019, the absence of a specialised parliamentary committee to exercise budgetary oversight severely undermined the legislature's ability to influence budget formulation. Additionally, access to information mechanisms are weak. Malaysia has no unified Freedom of Information Act, with only a handful of states having adopted comparable legislation. 15 Instead, access to information is constricted by the Official Secrets Act, which limits the publication of defence data. 16 Though there have been some positive steps in recent years, such as the launch of the government's Open Data platform, 17 the majority of defence information remains difficult to access. While the military derives the entirety of its funding from central government allocations, there remains a degree of secrecy around the workings of LTAT, the military's pension fund that owns numerous publicly listed companies. A number of these have come under scrutiny for mismanagement and misuse of funds during election campaigns and represent potentially serious corruption risks. 18 While some degree of scrutiny exists over these holdings, it remains weak, especially in terms of the highly opaque appointment of board members and executive directors.

Personnel Ethics Framework

Whistleblowing legislation	Whistleblower Protection Act (2010)
# defence-sector whistleblower cases	Data is not publicly available.
# Code of conduct violations	Military: Data is not publicly available.
	Civilian: Data is not publicly available.
Financial disclosure system	# submitted: Data was not available at the time of research.
	# of violations: Data > was not available at the time of research.

Despite attempts to improve governance and reduce corruption, the military has been regularly involved in corruption cases, involving senior and lowerranking officials who circumvent ethics rules to profit from their positions. The case of the missing helicopters, the corruption scandal involving land swap deals with private companies, 19 and the recent charging on corruption offences of senior intelligence and military officers in a bid rigging scheme, 20 point to failings in the enforcement of anti-bribery and anti-corruption rules for personnel. Despite strong formal codes of conduct for military and civilian personnel, enforcement relies on the Malaysian Anti-Corruption Commission (MACC), which has only limited resources to investigate and prosecute abuses, although it has proved itself effective regardless.²¹ Though its enforcement efforts have increased since 2018, it remains to be seen how the new government will approach the MACC and whether it will restrict its investigative powers. A key obstacle to strengthening anti-corruption standards and reporting is the weakness of whistleblower legislation. The Whistleblower Protection Act outlines provisions for those reporting wrongdoing but falls short in its ability to ensure protections.²² In the defence sector, personnel are largely unable to harness the Acts protections as they are bound by the Official Secrets Act, which prohibits any such disclosures. There have been no attempts to align the two laws. Amongst personnel, there is scepticism that protections will prove adequate, despite MINDEF taking steps to implement the Act's provisions, including the establishment of an Integrity Unit to process complaints. Additional weaknesses lie in the promotion and appointment processes. At senior levels in particular, political connections are key to progression and can supersede formal processes. Cultivating relationships with power brokers is critical to securing such senior appointments. Similarly, at lower ranks military politics play an outsized role in promotion decisions and there is little transparency surrounding these procedures. Parliament is not involved in reviewing appointments at senior levels and the process is not made public.

Operations

Total armed forces personnel (World Bank, 2018)	136,000
Troops deployed on operations #	820 in Lebanon (UNIFIL)

Though not actively engaged in large scale deployments, the Malaysian Armed Forces are involved in two theatres, the first in Lebanon, where Malaysia deploys a contingent of troops with the UN mission²³ and the second in the Sabah peninsula where terrorist attacks by Moro separatists have necessitated military deployments to ensure border security.²⁴ However, such deployments are occurring without proper attention to the threat corruption poses to the success of operations. Malaysia has no military doctrine recognising corruption as such. Though corruption is addressed in the Integrity Plan, this is not a strategic document and the guidelines provided are far from comprehensive. As a result, anticorruption is also at the margins of operational forward planning and relevant corruption risks are not necessarily included at planning stage for operations. These gaps are exacerbated by further failings in relation to training. Commanders do not receive training on corruption issues ahead of deployments that address specific corruption risks in the theatre of operations. As a result, troops are deployed without awareness of such risks and ill-equipped to respond and mitigate these threats in practice.

Defence Procurement

Military expenditure (US\$ mil) (SIPRI, 2020)	3,910
Open competition in defence procurement (%)	20-30%
Main defence exports – to (SIPRI, 2016-20)	N/A
Main defence imports – from (2016-20)	Spain, Turkey, South Korea, United Kingdom, Germany

Even prior to the COVID-19 pandemic, weak economic growth amid falling oil revenues had negatively impacted defence procurement. ²⁵ With the added economic constriction resulting from the pandemic, the military's funding issues are likely to persist. However, with a huge number of programmes currently ongoing or near completion, procurement is forecasted to remain stable. ²⁶ Nonetheless, weak enforcement of rules and regulations in the field risks undermining such processes and fuelling corruption. Formal procurement regulations are fairly strong. Tendering rules are set out by the Financial Procedure Act²⁷ and Contracts Act, ²⁸ which prescribe open tendering except when acquisitions are related to national security. The defence procurement cycle as a whole is formalised in the Government Procurement Regime, which outline the tender process, design of specifications and asset disposal processes. ²⁹ Yet in practice, deviations are frequent. The abuse of national security exemptions means that less

than a third of procurement is done through open competition, with the rest conducted through single-sourcing.³⁰ Such procedures overwhelmingly favour politically-connected companies such as DEFTECH, Malaysia's largest domestic contractor. With a number of former senior military officials on the company board, DEFTECH secures the majority of high-value defence contracts and can influence tendering decisions.³¹ Procurement is also subject to external influences, with decisions often vendor-driven and against strategic interests.³² For instance, Malaysia sometimes procures hardware in exchange for palm oil, exposing the procurement process to political influence from suppliers.³³ External oversight of the process is also weak and political influence is regularly used to circumvent established protocols. For instance, the purchase of military helicopters in 2015 was done in violation of the Ministry of Finance's procedures, as the contract was awarded through direct negotiation, with unfavourable terms and approved without any military specifications.³⁴ For their part, parliament and audit bodies do not have the power to question or cancel selected procedures and can provide only ex-post scrutiny.
